“Meet-A-Scientist” Day at the Science Factory

Register today for Winter Term!
1 credit P/NP—No prerequisites
Tuesdays 4:00-4:50 PM, MNCH
Instructor: Dr. Bryan Rebar
CRN 27217/27218 (PHYS 408/508)

Science Outreach is designed for undergraduate and graduate students interested in improving their ability to communicate their STEM (science, technology, engineering, math) understandings to public audiences, primarily K-12 age students, in a variety of learning settings. The course involves instruction in interactive teaching methods aimed at inviting learners to engage in scientific practices. Current theories about how people learn will also be introduced. Each week students are expected to complete two hours of public outreach with community partner organizations (museums, afterschool programs, etc.), reflect on their experiences, and discuss ways to improve.
